

Microsoft Azure from BCM One

The cloud is an integral component of any modern technology strategy, and Microsoft Azure is one of the more popular cloud solutions on the market today with an ever-expanding set of cloud services. Built with a secure foundation and consumption-based licensing—pay-as-you-go means you can scale up or down as needed and you only pay for what you use—Azure offers cloud services for organizations of any size. No matter where you are on your Microsoft Azure journey, BCM One is with you every step of the way.

BCM One Helps You Migrate, Build, Deploy, and Manage Applications on Microsoft Azure

BCM One is a technology company, but we never start there—we always focus on our clients' business needs and build a solution to meet those requirements. As a Microsoft Azure Gold Partner, this means we'll work with you to develop and execute on a customized cloud strategy that will drive your business objectives. Whether you need to migrate your entire infrastructure or just spin up a new cloud database, we can help.

Our experts will work with you design your cloud infrastructure—including backup and disaster recovery, as well SQL migration—and Azure licensing. We'll review your current assets to identify which can be migrated and determine the best migration path. Once Azure is deployed and migrated across your infrastructure, we'll monitor it from our 24x7 NOC, and we'll even help you control usage and spend with our cloud optimization solutions.

BCM One: Your Go-To for Microsoft Azure

- Microsoft Azure Gold Partner
- Cloud infrastructure design
